Missed children covered the same day	47.0%	40%	Met
ICM recall (caregiver recall)	90.1%	90%	Met
ICM finger-mark seen	97.2%	90%	Met

ICM recall is good but administrative coverage is below the benchmark, which points to missed or unreported children in the denominator rather than to poor vaccination technique.

Annex: Monitoring-to-action framework

Monitoring is valuable only when a finding changes field action. Each signal should lead to a response, an owner and evidence of closure, reviewed at the next ERM.

Monitoring signal	Interpretation	Required response
Team-missed child or house (NT)	Preventable operational miss	Same-day revisit; route-map and micro-plan review; training focus
High NA or child-away	Timing and revisit problem	Timed revisit plan with supervisor verification
Carrier handling or cold-chain gap	Practice weakness	Immediate on-job demonstration and re-check
AIC without support logistics	Supervisory readiness failure	Equip before deployment; verify at morning start
Low ICM recall despite high coverage	Quality concern behind reported coverage	Targeted sweep and independent re-monitoring
Abrupt refusal change	Possible improved disclosure or integrity signal	Household verification and refusal line-list review
